

Pioneering. Open Source. Security.

Open Source Internet Security LeadersSM

A photograph of two fencers in white protective gear and black masks, engaged in a sparring session on a wooden floor. The fencer on the right is in a ready stance, holding their foil. The fencer on the left is also in a ready stance, holding their foil.

EnGarde Secure ProfessionalTM

Performance and Stability Meet Security

"By implementing the Guardian Digital EnGarde platform, the Chicago Stock Exchange has experienced an increase in network security and a decrease in time necessary for system management."

- Dave Coder
Manager of Network Services
Chicago Stock Exchange

EnGarde Secure Professional is an enterprise class Linux platform engineered from the ground up to enable corporations to quickly build a complete Internet presence while consistently protecting corporate networks from Internet threats. Leveraging the best in open source technology, coupled with the security expertise of Guardian Digital, EnGarde delivers the perfect combination of functionality, stability, scalability, and unmatched security to organizations of all sizes.

Realizing that security can no longer be an afterthought, EnGarde is recognized as best-in-class by multi-national corporations for its impressive usability and depth of approach to network and Internet security. Multi-layered network security applications defend servers from all forms of Internet threats, ensuring the continued integrity of business-critical applications. EnGarde is unmatched in its proven ability to successfully alleviate Internet and network security issues relating to user privacy, reliability, system integrity, and corporate confidentiality.

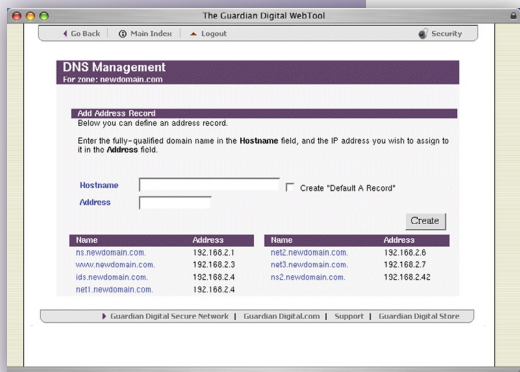

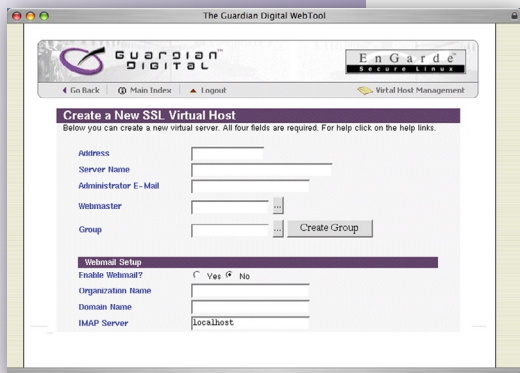

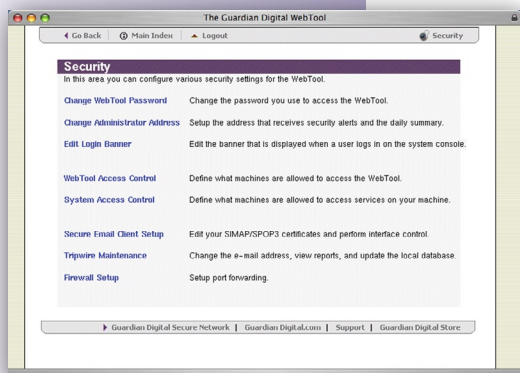

The versatile design and engineered security of EnGarde allows organizations to configure each system based on their individual security needs. Offering a broad suite of Internet services, EnGarde provides powerful functionality and bullet-proof protection for any corporate network and offers flexible, robust protection where security is a primary concern.

Increased User & Network Productivity

EnGarde Secure Professional combines security and productivity in one simple to manage platform. Meeting the most stringent requirements of any organization, EnGarde provides a powerful, cost-effective means on which to build and manage a secure Internet presence. Established as the most comprehensive solution available, EnGarde boasts a myriad of dynamic applications and available support services to ensure corporate networks are consistently running at their optimum performance level.

Together with a simplified web-based management system and customized Master Support options, EnGarde lessens the often tedious duties of managing all network functions, significantly reducing IT costs associated with configuration, system maintenance, and resource management.

Combining security, productivity, and ease of management, this power-packed Linux-based platform empowers organizations with the tools necessary to successfully and securely conduct business on the Internet.

Feature & Benefit Summary

- o Secure Network & Internet Services including Web, DNS, FTP & Email
- o Powerful Host & Network Intrusion Detection & Prevention
- o Comprehensive Auditing & Graphical Reporting System
- o Simplified Web-based Management System
- o Gateway Firewall Services
- o Sophisticated Access Control Methods
- o Engineered Security with Advanced Levels of Protection from Internal and External Threats
- o Quickly & Effortlessly Build a Complete and Totally Secure Internet Presence
- o Flexible, Versatile & Resilient Open Source Architecture
- o Protection from Data Loss
- o Compatibility with Thousands of Existing Software Packages
- o Significantly Reduces IT & Support Costs
- o Unmatched Support Services
