Content & Policy Enforcement CenterTM

"Intelligent Statistical Approach to Eliminating Internet Threats"

"Guardian Digital CAPE center technology has brought a heightened level of security to our organization unavailable in previously implemented mail systems. The unique multi-layered design and engineered system defenses ensure only legitimate email hits our inboxes and potentially damaging messages are detected before doing any harm. In fact, in a matter of a day or two after installing Secure Mail Suite with the CAPE technology, our spam was reduced by 98%."

- Lars Baan,
Vice President of Operations,
Aalborg Instruments, Inc.

Spam and virus incidents cost worldwide corporations billions of dollars every year. With email being the source of more than 80% of all virus infections, and spam encompassing greater than 78% of all email, proactive protection is critical to maintaining the continued competitive advantage provided by efficient email and web servers. Guardian Digital Content & Policy Enforcement (CAPE) Center is an innovative, multi-tiered defense system designed to deliver bulletproof protection for corporate inboxes by virtually eliminating all forms of junk and potentially harmful email. Unlike traditional "single-purpose" email security solutions, Guardian Digital CAPE Center provides comprehensive spam, virus, and corporate policy protection at each application layer delivering greater efficiency, consistently higher levels of protection, and dramatically reduced operational costs.

Powering the email security operations of Guardian Digital Secure Mail Suite, CAPE Center is distinctive in its approach, bringing together the most technologically advanced open source developments, a multitude of standards-based security solutions, and the ingenuity and security expertise of Guardian Digital. Protecting against spam, viruses, blended email threats, and corporate policy violations, Guardian Digital CAPE Center is proven to be the most vigilant approach to email security.

Multi-layer Email Defense

Creating the most cohesive, multi-layered enterprise email defense solution, Guardian Digital Secure Mail Suite and CAPE Center provide organizations with all the tools they need to continually keep email communications secure and productive

Network Level Spam Protection

Utilizing innovative techniques and qualified resources Guardian Digital CAPE Center can positively identify spam by employing regularly updated Internet and in-house generated lists to ensure optimum protection from known spammers.

System Level Spam Protection

Through system level spam protection including next generation auto-learn statistical filtering and malicious content filtering, junk mail is consistently eliminated, false positives are significantly reduced and potentially damaging email messages are quarantined resulting in improved speed and efficiency of the mail system.

User-Level Spam Protection

Personalized spam setting allow end-users to effortlessly block known offenders & patterns in real-time while ensuring messages from legitimate senders always reach their destination. Trusted senders lists enables the designation of particular addresses to be immune to filtering techniques, thereby allowing them to enter mail folders unimpeded, resulting in fewer false positives.

Comprehensive Auditing & Reporting System

Graphical reports provide administrators with all the information necessary to verify effectiveness & proper resource management. Pinpoint potential system or user problems quickly and provide accountability for unauthorized use.

Powerful Virus Protection

Guardian Digital CAPE Center provides powerful virus protection to detect and disinfect email borne viruses. Perform scheduled or on-demand virus scanning of emails containing regular attachments, compressed files and archived files anytime to ensure maximum protection from all email communication. Automatic updates through Guardian Digital Secure Network, ensures Cape Center's virus protection module always encompasses the latest technologies to thwart the latest virus types.

Advanced Authentication

Authenticate mail users using sophisticated methods to ensure corporate mail resources are only employed by authorized users.

Policy Enforcement System

CAPE Center's policy enforcement tools allow administrators to configure access controls, create custom filters for individual users, and control aspects of how messages are delivered, stored, and routed. Configuration options can be set to automatically block, reject, quarantine, delete or forward messages based on specific body or envelope patterns that may be contrary to corporate policy.

Enforcing Legitimate IT Resource Utilization

Designed to make email work smarter, Guardian Digital CAPE Center utilizes powerful policy enforcement applications to ensure Internet and email resources are always being used for legitimate business purposes. Increasingly, the influx of unsolicited and junk mail causes a reduction in employee productivity. With comprehensive access controls and customizable mail rules, CAPE Center enforces corporate email policies, increasing user productivity, and protecting your network from potentially malicious content transmitted through email. Pinpoint and quickly address potential problems and provide accountability for unauthorized use.

Email policy enforcement gives organizations the ability to ensure that email resources are used appropriately and efficiently. Increase security, user productivity, and conformance with corporate policies by controlling network resources, mail distribution, and access. Monitor incoming and outgoing messages while possessing the ability to accept or reject mail based on specific characteristics of the message, eliminating the threat of executables, macros, and other potentially harmful files from entering the corporate network.

Feature & Benefit Summary

- Comprehensive Spam Protection
- Multi-faceted Virus Detection
- Advanced Authentication Mechanisms
- Innovative Multi-tiered Design
- Sophisticated End-User Controls
- Robust Auditing & Reporting
- Reduce Liability with Flexible Policy Enforcement
- Simplified, Consistent Administration
- Ensure Data Integrity
- Resilient Open Source Architecture
- Raise Employee Productivity & Lower IT Costs
- Built-in Proactive Protection
