Guardian Digital Secure Network™

Security at Your Fingertips™

"In an ever-changing technological environment, the Guardian Digital Secure Network provides a fast, easy, way to maintain our systems and keep it consistently secure. The automatic update function and exceptional technical support combine to form the most cost-effective and effortless means to protect our intellectual property."

- Ken Romero,
  Cisco Systems Engineer

Guardian Digital presents the most proactive approach to managing and securing your corporate network. The Guardian Digital Secure Network (GDSN) is a means to keep your systems updated while at the same time receiving authoritative advice, information, and additional services from the experts. As you focus on building your Internet presence, Guardian Digital focuses on assuring you are protected from cyber vandals and consistently developing system improvements.
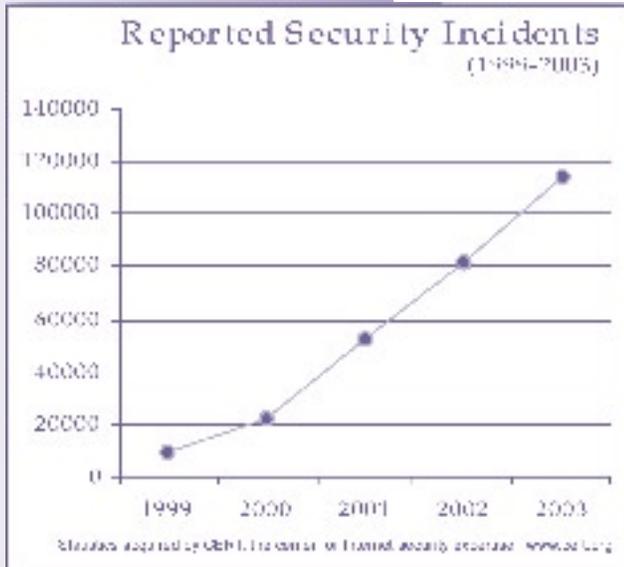

Available with the purchase and annual renewal of EnGarde Secure Linux and corresponding security suites, Guardian Digital Secure Network is the only complete security support solution that delivers frequent automatic updates, customized technical support services and rapid responses from a Guardian Digital security expert while alleviating tedious management duties and persistently providing protection for your entire network.

Revolutionizing Network Security

Reported Security Incidents (1999-2003)

Statistics acquired by CERT, the center for Internet security response. www.cert.org

In recent years, reported security incidents by corporations have risen considerably. As the number of Internet threats continues to rise, the need for a consistently secure and up-to-date network becomes evident. Focused on keeping your system up-to-date and consistently protected from cyber vandals, the Guardian Digital Secure Network is the least expensive way to add dedicated security experts to your staff. The GDSN provides updates, advisories and customized security improvements preventing virtually all security breaches, saving your company potentially thousands of dollars in lost revenue and recovery costs.

Whether you are responsible for securing a large network or just one computer, this vigilant approach to system security and management is the most effective means to protect your online assets and consistently keep your network defenses at their most optimum level.

Features

● **Software Maintenance Manager**
Automatically deliver software updates to one server or your entire enterprise.

● **Customized Technical Support & Security Improvements**
Tailored to the specific requirements of your system.
