Internet Acceleration & Management ServerTM

Simple and Secure Web Caching

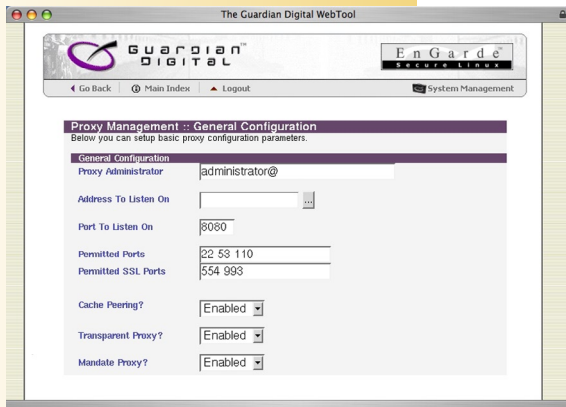

"The Internet Acceleration and Management Server has proven to be an important network tool for our organization. It allows me to provide a heightened level of security and efficiency for employees utilizing business-critical Internet applications, substantially increasing both user and system productivity."

- Lars Baan
Vice President of Operations,
Aalborg Instruments, Inc.

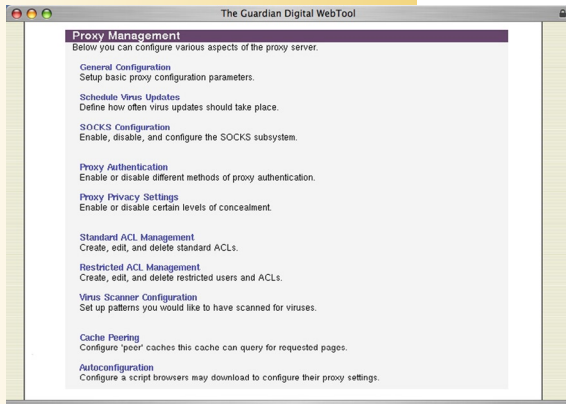

Guardian Digital Internet Acceleration and Management Server (IAMS) is a complete proxy, cache, and authentication solution that provides organizations with an unmatched level of security and commanding control over how Internet resources are utilized. Encompassing the best and most technologically advanced applications available, combined with the security expertise of Guardian Digital, IAMS effectively addresses an organization's growing need for robust system protection, increased efficiency, and lower IT costs.

The innovative design of the IAMS integrates powerful security and productivity features into one easy to use system. Providing extensible enterprise proxy caching, bandwidth and user access controls, virus scanning, VPN support, and system reporting, IAMS is the most cost-effective, complete and secure Internet proxy and connectivity solution in its class.

Powerful Internet Acceleration, Increased Productivity

Guardian Digital designed IAMS to dramatically increase the speed and power of conducting business on the web by affording organizations all the tools they need to conserve expensive IT resources, resulting in reduced overhead and a substantial increase in network and user productivity.

Significantly improve employee and system productivity with sophisticated access control policies, application filters and high-speed web caching. Comprehensive access controls and smart application filters allow administrators the ability to permit or deny access to Internet resources for each user, while high-speed web caching accelerates access for the entire organization. Enhance internal productivity and security by ensuring appropriate utilization and immediate availability of business-critical applications and information.

Feature & Benefit Summary

- High-Performance Web Cache
- Access Controls & Smart Application Filters
- Extensive Reporting and Usage Statistics
- Gateway firewall & Integrated Network Intrusion Detection
- VPN support using PPTP
- Distributed and Hierarchical Caching
- Publish Internal Resources to the Internet
- Virus Scanning & User Authentication
- Increase Network Speed, Power & Effectiveness
- Conserve Valuable Bandwidth and Increase Internet Response Times
- Pinpoint Corporate Policy Violators
- Identification and Protection from Internal and External Network Threats
- Raise Employee Productivity & Significantly Reduce IT Costs
- Flexible, Versatile & Resilient Open Source Architecture
- Comprehensive Support Services
