## Effective Internet Filtering, Increased Productivity

In today's fast-paced Internet-friendly world, organizations are consistently faced with growing network security risks and productivity challenges. When used appropriately, the Internet is an invaluable corporate tool providing an endless supply of information and instant communication connectivity. However, statistics show that in many cases, online business resources are instead being misused by employees for personal activity, causing a dramatic decrease in workplace productivity. Guardian Digital prevents Internet resource exploitation with SurfSecure. A comprehensive content filtering system, SurfSecure effectively protects corporate networks from unproductive, offensive, and potentially damaging activity on the Internet.

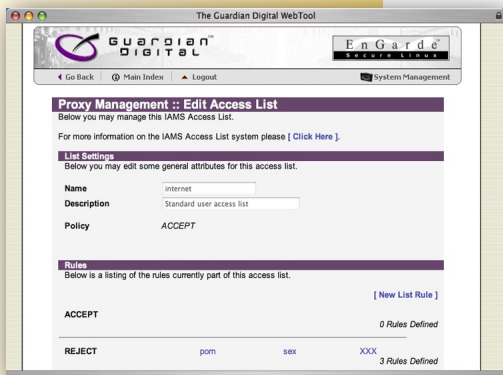

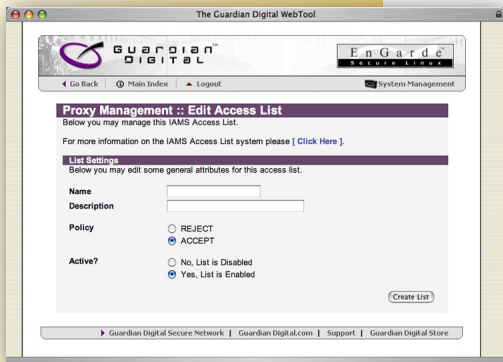

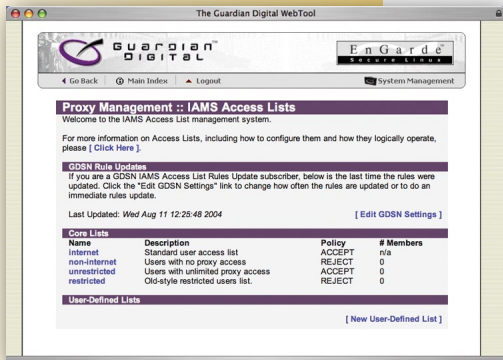

With workplace Internet abuse increasing by the day; it is essential that organizations of all sizes take preventative action to protect their online resources by ensuring they are being used for legitimate business purposes. If not properly protected, corporate Internet resources can be used for inappropriate, offensive or illegal activities which can result in system compromises, deterioration network resources, and legal action. An average of one-third of the time employees spend online at work is for non-work-related purposes and as a result, is costing American corporations more than \$85 billion annually in lost productivity and lawsuit settlements. Guardian Digital developed SurfSecure to be a critical security component to the Internet Acceleration and Management System. The powerful proxy caching capabilities of the Internet Acceleration and Management Server combined with the bulletproof protection of SurfSecure results in a best-in-class solution to keep Internet resources efficient and users compliant with corporate policies.

## Protecting Corporate Networks

Proven to substantially increase employee productivity, conserve network resources, and reduce legal liability, Guardian Digital SurfSecure provides an effortless and efficient Internet filtering solution. Pre-defined site lists make administration simple by providing updated information on websites and Internet categories known to present problems in today's corporations. Flexible access controls allow administrators to choose the sites they wish to block, and accept the ones they wish users to access. SurfSecure also includes a constantly-evolving collection of website categories to provide fine-grained control over individual user access. Combining flexibility and functionality, SurfSecure allows administrators to balance work related and personal surfing permissions by configuring access based on groups, departments, or individual users, providing organizations with the powerful, customized protection only available from Guardian Digital.

### Feature & Benefit Summary
