

# Guardian Digital Launches LinuxSecurity.com

*Feb 2nd, 06:24 UTC*

Guardian Digital, Inc., an Open Source Security Company, Releases LinuxSecurity.com, the Linux Community's Center for Security.

**February 2<sup>nd</sup> 2000 --- Upper Saddle River, New Jersey, USA ---**

"Pioneering. Open Source. Security"(tm)

Responding to the rising demand for Linux security information, LinuxSecurity.com aims to be "The Linux Community's Center for Security". After an extensive period of planning and development, LinuxSecurity.com the vision is now a reality. Founder David Wreski, co-author of the Linux Security HOWTO and other security resources, and his partners have designed an intuitive and easy to use web site with a focus on open source security. The site's goal is to deliver relevant content and information on security issues as they relate to the various distributions of Linux and BSD operating systems as well as any open source products for which security issues arise.

Linux is a true multi-user and multitasking operating system that resembles the likeness of Unix. It has become popular amongst the computing community and is known for its stability and security. Companies such as Network Associates, Check Point, Dell, IBM, and many others have recognized Linux as being an attractive security and server solution for the enterprise.

The rising need for security information and solutions has grown exponentially in recent years. Since Linux is growing in popularity so quickly - especially among data-sensitive businesses - security issues are a critical component of the viability of Linux. The Linux security arena is progressing at a lightning pace. Security professionals believe that the free software strategy that Linux employs provides a superior vehicle to improve security. Confidence that Linux not only works well, but that it also has features and related products that allow for a relatively secure environment for computing. LinuxSecurity.com is at the center of a process of distributing relevant news, information, and product updates to ensure the secure use of Linux, BSD, and various open source products.

"We see LinuxSecurity.com as filling the void in the open source security information arena," said David Wreski, director of LinuxSecurity.com. Attention to security vulnerabilities and events is the first step in maintaining the integrity of your assets. Understanding the fundamentals of security is a great start. Becoming aware of possible vulnerabilities and closing them is the job. The importance of security is underplayed until the day an attacker strikes. "The ubiquity of the Internet and the rapid growth of Linux has made security a critical component of business operations. We feel we have

created a solid foundation for disseminating security information and resources," said David Wreski.

The site layout is setup in such a way that it makes finding open source security-related information easy. Sifting through the information posted all over the Internet can be a tedious and very time-consuming task. LinuxSecurity.com helps position security professionals toward obtaining the advantage against potential attackers.

### **About Guardian Digital, Inc.**

Guardian Digital, Inc. is an upstart open-source security company and the primary sponsor of LinuxSecurity.com. Guardian Digital provides consulting, installation/support and computer-security services to businesses looking to use the Linux open-source operating system. Founded in 1999, Guardian Digital is headquartered in Upper Saddle River, NJ. The company can be reached at +01-201-934-9230.

Guardian Digital and the Guardian Digital logo are service marks, and "Pioneering. Open Source. Security." is a trademark of Guardian Digital, Inc. LinuxSecurity.com and LinuxSecurity.com logos are trademarks of Guardian Digital, Inc. Linux is a registered trademark of Linus Torvalds. All other trademarks are acknowledged.
