Guardian Digital Announces Corporate Partnership Program

Partnership Program to Provide Collaborative Support for Organizations Wishing to Leverage Guardian Digital Products

Upper Saddle River, NJ - July 16, 2001 - Guardian Digital, Inc., the first full-service Open Source security company, today announced the availability of the Guardian Digital partnership program for [EnGarde Secure Linux](#), the secure Web-managable Linux distribution featuring complete eBusiness capabilities, mail and DNS management, and built-in intrusion detection.

The Guardian Digital Partnership Program provides cost-effective tools to participating vendors for profitably deploying secure network solutions utilizing EnGarde Secure Linux and the [Guardian Digital Linux Lockbox](#) secure turnkey server appliance.

Formal product training, significant discounts on product purchases and support, beta program participation, priority access to support, participation in sales programs and future product direction planning discussions, and much more are included in the Program.

"The Guardian Digital software and hardware offerings provide a robust and price-competitive solution for VARs and consulting firms wishing to integrate a secure Internet presence into a customer's network," notes Travis Schefcik, CEO, SB Security, Inc. "The ease-of-use and high degree of security that EnGarde employs, combined with low cost of management and ease of deployment, make EnGarde and the Guardian Digital Linux Lockbox server appliance a great fit for our partners," said Benjamin D. Thomas, director of corporate relations.

Guardian Digital seeks channel partners and software resellers who are skilled in integrating our secure turnkey commerce and Web servers into their customers' environments, and using our software as a component of their service offerings.

EnGarde Secure Linux dramatically reduces the time and expense required to build full-featured eBusiness storefronts, improves the level of assurance required to be on the

Internet today, and alleviates extended learning curves typically associated with Linux through the use of the secure Web-based system management tools.

The Guardian Digital Linux Lockbox, a secure turnkey server appliance featuring specially-optimized and pre-configured EnGarde, is the perfect solution for partners to leverage the power and security of EnGarde, while offering their customers an inexpensive means to quickly develop their online presence. Our partners can immediately realize Guardian Digital offerings as profitable due to the Open Source foundation on which they are built, and the ease of maintenance and administration.

Program enrollees receive a reseller starter kit that includes copies of EnGarde Secure Linux Corporate, free support incidents, product marketing and sales materials, and subscription to corporate newsletters.

Contact Guardian Digital today and work with us as we continue to pioneer Open Source security solutions for the enterprise.

About Guardian Digital, Inc.

Guardian Digital, Inc. was established in early 1999 as the first Open Source security company, and since its inception has continued to deliver secure Open Source security solutions to the global market place. Guardian Digital tools include EnGarde, a Linux distribution that addresses the increasing demand for a secure Linux distribution that forms the foundation for Linux-based eBusiness solutions. Guardian Digital is also the primary sponsor of LinuxSecurity.com, the Internet's central source of news, insights, security advisories, and other information regarding Linux and Open Source security issues. Visit us on the Web at <http://www.GuardianDigital.com> or reach us toll-free at (866) GD-LINUX.

Pioneering. Open Source. Security.
